TITLE: Mixt. for prepn. of **fused** monolithic **refractory** material  
- contains oxide(s) of aluminium, sodium, zirconium,  
silicon and magnesium, to improve properties

----- KWIC -----

Basic Abstract Text - ABTX (1):

A mixt. contg. (in wt.%): **Al<sub>2</sub>O<sub>3</sub>** 87.4-96.5, Na<sub>2</sub>O 0.5-2.6, ZrO<sub>2</sub> 0.5-3, **SiO<sub>2</sub>** 0.5-2.5 and **MgO** 2-4.5, is used to produce **fused** monolithic **refractory** material used as lining for glass making furnaces. Use of the components in specified ratio and omission from the mixt. of B<sub>2</sub>O<sub>3</sub>, improves its properties. The components are melted, cast in graphite moulds and cooled slowly over 3-4 days in diatomite powder. The material is corroded by alkaline borosilicate melt at the rate of 0.7-0.8 mm/24 hours. ADVANTAGE - Reduced tendency to formation of bubbles in the melt in contact with the material, with the bubble forming index reduced from 18.8-21.3 to 5.3-8.1 units. Bul.13/7.4.89

Title - TIX (1):

Mixt. for prepn. of **fused** monolithic **refractory** material - contains oxide(s) of aluminium, sodium, zirconium, silicon and magnesium, to improve properties
